SCHEMATIC DIAGRAM (DA-A10)	20
SCHEMATIC DIAGRAM (DA-A15)	21
PARTS LIST	22

Item	Specification	Remarks
Continuous Power Output	100 W/ 100 W (8 ohms) 135 W/ 135 W (4 ohms)	both channels driven from 20 Hz to 20 KHz
Total Harmonic Distortion	0.1 % (continuous rated output) 0.02 % (1 W per channel)	20 Hz to 20 KHz
Intermodulation Distortion	0.1 % (continuous rated output) 0.02 % (1 W per channel)	60 Hz and 7 KHz 4:1
Power Bandwidth	10 - 50,000 Hz	IHF (-3 dB), THD 0.1 %
Frequency Response	20 - 20,000 Hz $\pm$ 0.1 dB (continuous rated output) 10 - 100,000 Hz $\pm$ 0 dB (0.5 W output)	
Input Sensitivity	1 V (variable)	
Input Impedance	50 Kohms	
Damping Factor	100	8 ohms, 20 Hz to 20 KHz
Channel Separation	90 dB (1 KHz) 80 dB (20 KHz)	
Hum and Noise	0.27 mV	input short-circuited, unweighted
Signal to Noise Ratio	100 dB	input short-circuited, unweighted
Square Wave Response	0.7 micro-seconds rise-time	20 Hz to 20 KHz
Slew Rate	15 V/micro-second	10 V p-p output
Power Consumption	380 W (continuous rated output) 240 W (1/10 continuous rated output)	
Dimensions	16-3/4(W) x 6-3/4(H) x 11-1/4(D)"	425 x 170 x 285 mm
Weight	36-1/2 lbs	16.5 kg
Circuits	(1) Dual Monaural Construction (2) Differential Amplifying 2-Stage Current Mirror Drive Circuit (3) Symmetrical Full Complimentary 3-Stage Darlington OCL Output Circuit (4) Relay Protection Circuit	

Item	Specification	Remarks
Continuous Power Output	150 W/ 150 W (8 ohms) 200 W/ 200 W (4 ohms)	both channels driven from 20 Hz to 20 KHz
Total Harmonic Distortion	0.1 % (continuous rated output) 0.02 % (1 W per channel)	20 Hz to 20 KHz
Intermodulation Distortion	0.1 % (continuous rated output) 0.02 % (1 W per channel)	60 Hz and 7 KHz 4:1
Power Bandwidth	10 - 50,000 Hz	IHF (-3 dB), THD 0.1 %
Frequency Response	20 - 20,000 Hz $\pm$ 0.1 dB (continuous rated output) 10 - 100,000 Hz $\pm$ 0 dB (0.5 W output)	
Input Sensitivity	1 V (variable)	
Input Impedance	50 Kohms	
Damping Factor	100	8 ohms, 20 Hz to 20 KHz
Channel Separation	90 dB (1 KHz) 80 dB (20 KHz)	
Hum and Noise	0.3 mV	input short-circuited, unweighted
Signal to Noise Ratio	101 dB	input short-circuited, unweighted
Square Wave Response	0.7 micro-seconds rise-time	20 Hz to 20 KHz
Slew Rate	15 V/micro-second	10 V p-p output
Power Consumption	520 W (continuous rated output) 320 W (1/10 continuous rated output)	
Dimensions	16-3/4(W) x 6-3/4(H) x 11-1/4(D)"	425 x 170 x 285 mm
Weight	40 lbs	18 kg
Circuits	(1) Dual Monaural Construction (2) Differential Amplifying 2-Stage Current Mirror Drive Circuit (3) Symmetrical Full Complementary 3-Stage Darlington OCL Output Circuit (4) Relay Protection Circuit	

COMPONENTS AND FUNCTIONS

DA-A10, DA-15 Front Section

THERMAL INDICATOR

When temperature of the radiator exceeds 60°C (140°F), this label turns out to be black from red. At this time, do not touch the radiator.

POWER INDICATOR

When the amp power supply is turned on, this indicator lights in red.

DUCT

The duct contains connecting cord and power cord.

HANDLE MOUNTING HOLES

DA-A10, DA-A15 Rear Section

CONNECTION

CONNECTING NOTES

Before connection, turn off the power supply at all times.

Otherwise, the speakers are liable to be damaged by click noise caused when the cord is plugged in or out.

Avoid wrong connection

In case of incorrect connections such as reverse connection of R and L of terminal as well as (+) and (-) of speaker, or short circuit, stable sound cannot be obtained or the protective circuit remains operated.

Correctly make input terminal connection

When pin plug is loosely connected or disconnected, hum occurs and the protective circuit starts.

Use shielded wire for input terminal connection

Use a shielded wire of not more than 2m long.

Use speaker having nominal impedance ranging from 4 to 16 Ω

In this machine, when load impedance reaches 4 Ω or less, the protective circuit starts, resulting interruption of sound.

Strip wire sheath at tip of speaker cord in approximately 15mm, and then connect it to speaker output terminal.

HANDLE ATTACHMENT

- 1) Remove screws and washers from the radiator and duct.
- 2) Attach a provided handle on right side with screws as shown.
- 3) After the right side, proceed the left side similarly.

Attaching Procedure:

- 1) Affix provided rubber sheets on the handle as shown to protect the handle from damage.
- 2) Remove two couples of screws and washers from the power amp and pre amp respectively.
- 3) Attach and fix the handle on right side with four screws as shown.
- 4) After the right side, proceed the left side similarly.

SERVICING NOTES

When you find the following troubles, confirm whether other audio equipment correctly functions and is properly connected to this machine, and then check the following items.

1. Power supply is not turned on

- Incomplete plug-in of the power supply cord
- Power supply fuse is broken.

2. No sound is not produced

- Improper switch setting
- Protective circuit remains operated.

In this case, nominal impedance of the speaker drops below 4Ω ; use the speaker having nominal impedance of 4 to 16Ω .

- Incomplete plug-in of speaker cord and pin plug.
- Contact of (+) and (-) wires of speaker cord
- Imbalance of volume at right and left sides.

In this case, readjust BALANCE knob of the pre amp.

3. Noise is produced

- Player is not earthed.
- Output cord of player is placed close to power supply cord.
- Incomplete plug-in of pin plug

4. Sound quality is deteriorated

- Howling

It occurs when vibration of the speaker transmits to the player. To avoid howling, keep the speaker apart from the player as far as possible. Moreover, it is recommended to use insulator that is placed under the player to greatly absorb vibration.

5. Stereo sound and treble cannot be obtained

- Reverse connection of (+) and (-) of speaker cord
- Reverse connection of R and L of input terminal

6. Other

No sound is produced for five to seven seconds after switching-on of power supply

This is not trouble. This is why muting circuit works to prevent the machine from shock noise caused at switching on.

SPEAKER SELECTION

Speaker systems can be selected by SPEAKER SELECTOR mounted on the rear panel of the machine. When you use Mitsubishi DA-P10, you can select speaker systems by the pre amp, using a speaker control cable provided. At this time,

- set SPEAKER SELECTOR to "off".
- connect the speaker connect the speaker control cable as shown.

- After that, you can select speaker system by pre amp.

PARTIAL DISASSEMBLY

1. Bottom Plate Removal

- 1) Remove screws as shown in Fig.1.
- 2) At this time, do not confuse two types of screws in use.

Legend: A M4 x 8

B M3 x 8

Fig.1

2. Elevation of Printed Circuit Board

- 1) Remove nine screws from the bottom plate.
- 2) Remove four screws from the printed circuit board (PCB).
- 3) Cut four clampers binding lead wires, using nippers.

[Cutting position: Fig.2 ①]

- 4) Elevate PCB in direction shown by ② in Fig.2.
- 5) Finally, insert PCB into a groove of the radiator shown by ③ in Fig.2.

Fig.2

3. Capacitor Removal

- 1) Remove four PCB-fixing screws, then elevate PCB.
- 2) As shown in Fig.3, remove four screws, then take out a capacitor cover.

[Screws: 3 x 12, self-tapping screws, type-1]

- 3) Demount the capacitor from a holder.

At this time, although the capacitor is bonded to the holder, you can easily separate them with a small force.

- 4) When the capacitor is attached to the holder, always apply bond on the holder side.

Note: Be sure that the capacitor cover must be placed in direction shown on the cover top.

Fig.3

ADJUSTMENT

1. Idling Current Adjustment

- 1) Connect DC voltmeters between terminals 10 and 15, and between terminals 40 and 45 as shown in PCB (MA-22) of DA-A10.
- 2) Rotate VR103 and VR203 so that the DC voltmeter reads a minimum value.
- 3) Readjust VR103 and 203 so that the DC voltmeter reads $15 \pm 3\text{mV}$.
- 4) After switching-on of the power supply, wait approximately 10 minutes until stable state can be obtained. After that, readjust VR103 and 203 so that the DC voltmeter reads $42 \pm 3\text{mV}$.

2. Mid-Point Voltage Adjustment

- 1) Connect DC voltmeters between terminals 23 and 61, and terminals 53 and 61 as shown in PCB of DA-A10, setting SPEAKER SELECTOR to A.
- 2) Rotate VR102 and VR103 so that the DC voltmeter reads $0 \pm 5\text{mV}$.
